Bui Van Huy

Frontend Developer

Profile

- 0868698389
- buivanhuy2706@gmail.com
- Portfolio : bvanhuy.io.vn
- Ho Chi Minh City

Skills

SOFT SKILLS

- Communication Teamwork
- Problem Solving
- Time Management
- Self-learning

TECHNICAL SKILLS

- Programming Languages:
  - C++
  - JavaScript (ES6+)
  - TypeScript
- Web Development:
  - HTML5
  - CSS3, TailwindCSS
  - ReactJS
  - Node.js, NestJS
- Database Management:
  - MySQL
  - PostgreSQL
- DevOps & Tools:
  - Git & Github
  - Vs Code
  - Postman
  - Docker, Docker Compose

Education

Information Technology (3rd-year student) **2023 - Present**

Ho Chi Minh City University of Transport

- Relevant Coursework: Data Structures & Algorithms, Web Development,Database Systems.
- Current GPA**:** 3.2/4.0

PERSONAL PROJECT

Personal Developer Portfolio

February 2026 - Present

Frontend Developer

- Description: A Single Page Application (SPA) serving as a personal portfolio to showcase information, technical skills, and featured projects, highly optimized for User Experience (UX/UI).
- Technologies: ReactJS, TailwindCSS, TypeScript, Vite, React Context API, Vercel.
- Key Responsibilities & Contributions:
  - Architected a clean and scalable project structure with decoupled modules (Pages, Components, Contexts, Hooks, Locales).
  - Developed custom Internationalization (i18n) (English/Vietnamese) and Dark/Light Theme toggle features by deeply leveraging React Context API (LanguageContext, ThemeContext) without relying on heavy external libraries.
  - Implemented smooth client-side routing for seamless navigation across pages (Home, About, Skills, Projects) without full page reloads.
  - Optimized build performance using Vite and configured automated deployment pipeline via Vercel.

UTH Conference Management System

December 2025 - Present

Full-stack Developer

- Description: A comprehensive university-level scientific paper management system handling end-to-end workflows: submissions, reviewer assignments, and AI-assisted evaluations.
- Technologies: ReactJS, NestJS, TypeScript, PostgreSQL (Supabase), Microservices, Redux Toolkit (RTK Query).
- Key Responsibilities & Contributions:
  - Backend Architecture: Architected and implemented a Microservices ecosystem (Identity, Conference, Submission, Review) using NestJS. Ensured data integrity by applying logical database isolation on Supabase.
  - Frontend Development: Built a complex, role-based user interface (Admin, Reviewer, Author) using ReactJS. Optimized API fetching and state management using RTK Query.
  - Security & Data Flow: Implemented robust JWT authentication with an automated Refresh Token mechanism (using Mutex to prevent frontend race conditions).
  - Integration: Integrated multipart file uploads via Supabase Storage and connected frontend services with AI-driven microservices for grammar checking and abstract summarization.
